

D-Net®: The Way Netting Was Meant to Be

What is D-Net®?

D-Net® is ANCI's diamond-patterned netting engineered for breathable, flexible, and highly durable packaging. Made in Roanoke, Alabama, D-Net® leverages over two decades of resin-handling and extrusion expertise honed through the development of our industry-trusted CLAF® mesh. Designed for performance, D-Net® delivers reliability and shelf appeal across a wide range of markets, from fresh produce and toys to mechanical parts and novelty goods.

Its open mesh structure enhances airflow for perishable goods and reduces excess material waste compared to traditional packaging. With FDA-compliant resins, consistent construction, and customization options like mesh color, width, labeling, and roll length, D-Net® is a go-to packaging solution for brands that demand quality and flexibility. Whether you need shelf-ready presentation or industrial-grade strength, D-Net® is built to perform — and proudly made in the USA.

Features

- Made in the USA
- FDA-compliant & food-safe
- Breathable design for fresh produce
- Customizable sizing, colors & labeling
- Strong yet flexible
- Lightweight & cost-efficient

Applications

- Fresh produce (onions, potatoes, garlic)
